IN THE CLAIMS

Kindly amend Claims 20-25 and 31-46 as follows:

SUB
D, 1

20. (Twice Amended) A camera comprising:

a camera body;

an imaging device to conduct a photographing operation,
wherein following a photographing operation said imaging
device outputs image information;

[storage means including] a first semiconductor memory
capable of storing image information corresponding to at
least two photographic frames; [or more, and a second
semiconductor memory;]

a second semiconductor memory;

a recorder which stores [recording means for recording]
image information, output from said imaging device, on one
of the first semiconductor memory and the second
semiconductor memory; and

a changer [means] for selectively changing between a
first condition, in which image information outputted from
said imaging device is stored on said [from the recording of
image information on the] first semiconductor memory, and a
second condition, in which image information outputted from
said imaging device is stored on said [to the recording of

image information on the] ~~second semiconductor~~ memory [and vice versa].

21. (Amended) A camera according to Claim 20, wherein the first semiconductor memory is detachably mountable to the camera body, and the second semiconductor memory is fixedly provided in the camera body.

22. (Amended) A camera according to Claim 20, wherein the first semiconductor memory is an IC card.

23. (Amended) A camera comprising:
a camera body;

C2
5 [storage means including] a first memory capable of storing image information corresponding to at least two photographic frames; [or more, and]

a second memory;

10 a first reproduction device to receive and reproduce
[reproduction means for reproducing] image information recorded on one of the first memory and the second memory;
and

15 a changer [means] for selectively changing between a first condition, in which image information on the first memory is outputted to the first reproduction device, and a second condition, in which image information on the second memory is outputted to the first reproduction device [from the reproduction of image information recorded on the first memory to the reproduction of image information recorded on the second memory and vice versa].

24. (Amended) A camera according to Claim 23, wherein the first memory is detachably mountable to the camera body, and wherein the second memory is fixedly provided in the camera body.

25. (Amended) A camera according to Claim 23, wherein the first memory is an IC card.

5 SUB E2 31. (Amended) An editing device for a camera capable of receiving a memory card, in which the camera processes original image information obtained in a photographing operation in a manner suitable for storage and further stores such processed image information on the memory card, the editing device [compressing an image signal and recording the compressed image signal on a memory card] comprising:

10 CB a first reception unit for receiving a removable memory card;

15 a second reception unit for receiving an optical disc; a signal processor to restore processed [processing means for expanding the compressed] image information, stored [signal recorded] on the memory card, to original image information obtained in a photographing operation; and

a recorder to record [recording means for recording] the restored original [expanded] image information [signal] on the optical disc.

32. (Amended) An editing device according to Claim 31, wherein the signal processor restores [processing means

expands] the processed [compressed] image information
[signal] by expansion in a [the] DCT manner.

33. (Amended) A camera according to Claim 20, which
further comprises a finder for finding a camera subject.

34. (Amended) A camera according to Claim 20, which
further comprises a printer for printing on a recording
medium corresponding to the image information stored
[recorded] on one of the first semiconductor memory and the
5 second semiconductor memory.

C4 35. (Amended) A camera according to Claim 23, which
further comprises a finder for finding a camera subject.

36. (Amended) A camera according to Claim 23, which
further comprises a printer for printing on a recording
medium corresponding to the image information recorded on
one of the first memory and the second memory.

SUB E3 37. (Amended) An editing device according to Claim 31,
which further comprises a reading device to read [means for
reading the] image information from the optical disc.

38. (Amended) A camera comprising:
a camera body;
[storage means including] a first semiconductor memory
capable of storing image information corresponding to at
5 least two photographic frames; [or more, and]
a second semiconductor memory;

a reproduction device to reproduce [reproduction means
for reproducing] image information stored [recorded] on one
of the first semiconductor memory and the second
10 semiconductor memory; and

a changer to selectively change between a first
condition, in which image information on the first
semiconductor memory is outputted to the reproduction device
for reproduction, and a second condition, in which image
15 information on the second semiconductor memory is outputted
to the reproduction device for reproduction [means for
changing from the reproduction of image information recorded
on the first memory to the reproduction of image information
recorded on the second memory and vice versa].

cont

39. A camera according to Claim 38, which further
comprises a finder for finding a camera subject.

Sub 32 } 40. (Amended) A camera comprising:
a camera body;
an imaging device to conduct a photographing operation,
wherein following a photographing operation said imaging
5 device outputs image information;

[storage means including] a first memory capable of
storing image information corresponding to at least two
photographic frames; [or more, and a second memory]

a second memory;

10 a recording device to store [means for recording] image
information on one of the first memory and the second
memory;

15 a first changer to selectively change between a first condition, in which image information outputted from said imaging device is stored [means for changing from the recording of image information] on the first memory, and a second condition, in which image information outputted from said imaging device is stored [to the recording of image information] on the second memory [and vice versa];

20 a reproduction device to receive and reproduce [means for reproducing] image information stored on and outputted from [recorded on] one of the first memory and the second memory; and

25 a second changer to selectively change between a third condition, in which image information stored on said first memory is output from said first memory to the reproduction device for reproduction, and a fourth condition, in which image information stored on said second memory is output from said second memory to the reproduction device for reproduction [means for changing from the reproduction of image information recorded on the first memory to the reproduction of image information recorded on the second memory and vice versa].

41. (Amended) A camera according to Claim 40, wherein said first and second memories are semiconductor memories.

42. (Amended) A camera according to Claim 40, which further comprises a finder for finding a camera subject.

43. (Amended) A camera comprising:
a camera body;

cont

E's

5

an imaging device to conduct a photographing operation,
wherein following a photographing operation said imaging
device outputs image information;

[storage means including] a first SRAM memory capable
of storing image information corresponding to at least two
photographic frames; [or more, and]

10

a second SRAM memory, wherein at least one of said
first SRAM memory and the second SRAM memory being provided
in the camera body;

15

a recording device [means] provided within the camera
body for selectively storing [recording] image information
on one of the first SRAM memory and the second SRAM memory;
and

CS
cont

20

a changer [means] provided within the camera body for
causing said recording device [means] to selectively change
from a first condition, in which [recording of] image
information outputted from said imaging device is stored on
[one of] the first SRAM memory, and a second condition, in
which [the second SRAM to recording of] image information
outputted from said imaging device is stored on the [other
one of the first SRAM memory and the] second SRAM memory.

5

44. (Amended) A camera according to Claim [claim] 43,
wherein said first SRAM memory is contained on an IC card
which is detachably mountable to the camera body, and
wherein said second SRAM memory is provided in the camera
body.

9/5
7/7

45. (Amended) A camera according to Claim [claim] 43,
further comprising:

Sub 145
a reproduction device to reproduce [means for reproducing] image information stored [recorded] on a selected one of the first SRAM memory and the second SRAM memory; and

CS
cont. 10
15
a changer [changing means] provided within the camera body to cause [for causing] said reproduction device [means] to selectively change between a third condition, in which image information stored on said first SRAM memory is output from said first SRAM memory to the reproduction device for reproduction, and a fourth condition, in which image information stored on said second SRAM memory is output from said second SRAM memory to the reproduction device for reproduction [change from reproducing image information recorded on one of the first SRAM memory and the second SRAM to reproducing image information recorded on the other one of the first SRAM memory and the second SRAM memory].

46. (Amended) A camera according to Claim [claim] 45, wherein said reproduction device [means] is provided within said camera body.
